

Vinyl Decal Application Instructions

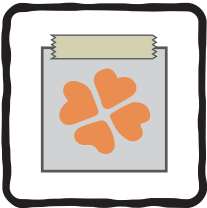

Step 1

Clean the area where the decal is to be applied to remove any dirt, dust, or grease. Allow this area to dry.

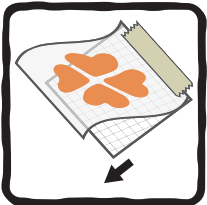

Step 2

On a flat surface, use a credit card to squeegee the decal layers together. This is to ensure the design is fully adhered to the application tape and ready for use.

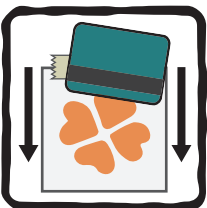

Step 3

Align the decal in its desired location, and use a strip of tape across the top edge of the design to hold it in place, creating a hinge with the tape. Choose your position carefully as the decal cannot be repositioned once installed.

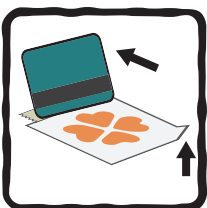

Step 4

Lift the decal up from the bottom edge, and carefully remove the bottom (paper) layer, being careful to ensure all parts of the design remain on the top (clear) layer. If any parts come away, lay the design back down flat, rub across them to stick them back to the top layer, and try again. Once removed, keep the decal lifted, and do not let it touch the application area just yet.

Step 5

Working from the tape line at the top of the decal, carefully apply the design, top down, to the surface. Use the edge of a credit card to carefully apply pressure and squeegee the decal into place.

Step 6

Squeegee across the entire decal once more to ensure it's properly adhered, then carefully remove the remaining top (clear) layer, leaving the decal in its final place.

Thank you for your order!
